

Where healing begins™

State of Infusion Therapy Today

Administrative Overload

Physicians spend excessive time on insurance paperwork, prior authorizations, and follow-up.

Patient Frustration

Delays, unclear guidance, high out-of-pocket costs, and poor experiences are common.

Financial Pressure on Providers

Office-administered therapies face rising drug costs and declining reimbursement.

Insufficient Patient Education

Patients often lack clear, accessible guidance on their condition, treatment, side effects, care coordination, and financial support.

Fragmented Communication

Disconnection between pharmacies, infusion centers, providers, and manufacturers causes treatment delays.

Limited Specialty Focus

Many centers lack disease-specific protocols and personalized care models.

No Standardized Treatment Algorithms

Inconsistent protocols reduce quality and outcomes.

Althea's Comprehensive Care Model

Our Solutions to Address the Issues

Physician-Led Coordination

Care is managed by physicians to ensure expert oversight and tailored treatment plans for each patient, enhancing clinical outcomes.

KOL-Vetted Treatment Algorithms

Utilizing treatment protocols vetted by Key Opinion Leaders to ensure clinically sound, expert-approved infusion therapies for optimal patient outcomes.

Infusion Delivered Where Needed

Flexible infusion delivery options including home, Ambulatory Infusion Centers (AIC), and physician offices provide convenience and accessibility.

Personalized Concierge Service

Offering tailored, concierge-level support that ensures every patient and provider receives individualized attention, ongoing care management, and seamless coordination throughout the treatment journey.

Data-Informed Communication

Using real time data aggregation and transparent communication to keep patients, providers, and care teams aligned while improving coordination, trust, and continuity of care.

Financial Advocacy & Patient Education

Providing patients with financial advocacy and education to understand coverage, navigate costs, and reduce barriers to accessing infusion therapies.

Impact of Our Efforts

Specialty Focused Care

Fewer hospitalizations, relapses and adverse reactions

Concierge Level Access

Higher treatment adherence and patient retention

Tech Enabled, Data Driven

Faster approvals, therapy starts

Evidence Based Protocols

Reduces treatment variability and lowers complication

Scalable, Outcome Focused Framework

Expands reach while preserving quality and efficiency

Empowered, Informed Patients

Improved understanding through education and support

The Road Ahead

Thyroid Eye Disease (TED) shows that concierge, protocol-driven infusion care with ongoing patient care management can be successfully implemented. With the right team and infrastructure, this same approach can be replicated across neurology, immunology, rheumatology, and beyond.
